

SUMMARY

Detail-oriented QA Engineer specializing in manual, API, UI automation, and performance testing for web applications and AI agent systems. Skilled in building automation frameworks using Playwright, Postman, and k6, integrating QA into the SDLC, validating LLM/MCP integrations, and mentoring teams on software quality.

EXPERIENCE

- Junior QA Engineer, Nymph Solution Ltd.

Jun 2026 – Present

 - Executed end-to-end testing for **VLM Run** – functional, UI, exploratory, and regression – uncovering 100+ defects across its AI workflows and Model Context Protocol (MCP) integrations with Claude.
 - Led mobile and web QA for **E-Mistri's** dual-app ecosystem, authoring 200+ test cases and surfacing 60+ defects across booking workflows, user authentication, and service tracking.
 - Tested **Kinki Management System** for a Japanese client – a platform for a house-clearance company that empties properties after tenants move out – validating expense calculation, billing, and invoicing workflows.
- SQA Project Instructor, IT Training BD

Feb 2026 – May 2026

 - Mentored and instructed students through hands-on Software Quality Assurance projects, covering industry-standard manual, API, automation, and performance testing methodologies.
- Python Intern, CodeAlpha (Remote)

Dec 2025 – Jan 2026

 - Built automated data validation scripts in Python and Pandas to check output accuracy and data consistency.

PROJECTS

- End-to-End Automation Testing Framework (Playwright)

[GitHub]

 - Architected a scalable UI automation framework using Playwright, Pytest, and the Page Object Model (POM) design pattern.
 - Integrated the suite into GitHub Actions CI/CD, running automatically on every push and pull request with test-report artifacts uploaded for review.
- VLM Run – AI/VLM Application Testing

[Project Website]

 - Executed end-to-end testing across core platform modules – Gateway, Skills, Billing, and API workflows – identifying 100+ defects prior to release.
 - Conducted performance and load testing using k6, analyzing throughput, error rates, and response times to identify system bottlenecks.
- nopCommerce – Manual Software Testing

[GitHub]

 - Authored and executed 100+ test cases for functional, smoke, and regression scenarios, managing the defect lifecycle from discovery to resolution.
- API & Performance Testing Suites

[GitHub]

 - Developed automated API test suites with dynamic data and assertions using Postman/Newman.
 - Simulated concurrent user traffic in k6 to establish baseline performance metrics and system thresholds.

EDUCATION

- Comilla University

Jan 2020 – Aug 2025

B.Sc. in Computer Science and Engineering

CGPA: 3.57 / 4.00

PROBLEM SOLVING & COMPETITIVE PROGRAMMING

- Algorithmic Proficiency:** Solved 800+ algorithmic problems across Codeforces (Rating: 1083), LeetCode, and GeeksforGeeks [Codeforces]
- Competitions:** Participated in 50+ competitive programming contests, demonstrating strong analytical and debugging skills.

TECHNICAL SKILLS

- Testing Types:** Functional, Regression, Smoke, Sanity, Exploratory, Integration, End-to-End, UI/UX
- Automation & Performance:** Playwright, Selenium WebDriver, Pytest, Page Object Model (POM), k6, Apache JMeter
- API & AI Testing:** Postman, Newman, Swagger, REST APIs, JSON validation, VLM Gateway, MCP, Claude integration, AI workflows
- Programming & Databases:** Python, SQL (MySQL, CRUD operations, Joins), C++, JavaScript (Basic)
- Tools & Processes:** Jira, Git, GitHub, VS Code, CI/CD Fundamentals, SDLC, STLC, Agile/Scrum, Root Cause Analysis

CERTIFICATIONS

- Full Stack SQA Course – IT Training BD Jan 2026
- Web Automation with Playwright – Udemy Apr 2026
- API Testing with Postman – Udemy Feb 2026
